

Comprehensive Audio/Video System at University Of Buffalo Neurosurgery Department Includes Hitachi CP-X505 LCD Projector In Conference Room

Voice and data solutions provider IPLogic recently helped elevate the University of Buffalo’s Neurosurgery Department with cutting edge technology, through the installation of an audio/video system that allows the department to stream video from its surgeries to two neurosurgery suites and an auditorium, which includes a Hitachi CP-X505 3LCD projector, using a Hitachi UL-604 long-throw lens. The projector displays video from operating rooms, which allows large groups of students and doctors to view surgical procedures.

The system at the University of Buffalo includes broadcast, streaming video and wireless audio technologies. Footage of the surgeries is captured via broadcast cameras and is encoded for global streaming video. This material can be distributed to the Hitachi CP-X505 projector.

According to Peter Grosskopf, manager of the MultiMedia Group with IPLogic, the decision to install the Hitachi CP-X505 projector was based on successful deployments of Hitachi projectors used in other projects. “For years we have been using Hitachi projectors for all our conference rooms,” said Grosskopf. “We have a long-standing relationship with Hitachi and always receive the best support from them and their technology outperforms other projectors in this size category Hitachi upholds the industry standard, so we always lead with them.”

OPPORTUNITY

University of Buffalo Neurosurgery Department needed highly detailed video solution to demonstrate surgical procedure.

HITACHI SOLUTION

A Hitachi CP-X505 3LCD projector with a UL-604 long-throw lens offers 3,500 ANSI lumens brightness.

RESULT

Students are able to view footage of surgeries more clearly, dramatically improving the educational experience.

“We have a long-standing relationship with Hitachi and always receive the best support from them and their technology outperforms other projectors in this size category. Hitachi upholds the industry standard, so we always lead with them.”

- Peter Grosskopf, manager of the MultiMedia Group with IPLogic
