Hitachi Introduces CP-X4011N 3LCD Network Projector

-- The CP-X4011N Offers Networking Features, USB Connection And Microphone Input --

CHULA VISTA, California, May 17, 2010 — Hitachi America, Ltd., Digital Media Division, Business Solutions Group is expanding its industry-leading series of networkable projectors with the new CP-X4011N 3LCD projector. In addition to networking features, the CP-X4011N offers a brightness of 4,000 lumens and XGA resolution.

The CP-X4011N's networking capability allows users to send images from one or more networked computers. In addition, Hitachi's Messenger function enables users to transmit text data to any or all projectors on the network. This is an easy and efficient way to send announcements, such as campus notifications, school activities and daily schedules.

The CP-X4011N's USB connection allows users to quickly and easily display content from a PC via a USB cable. It is also equipped with a microphone input which, in conjunction with two built-in 8W speakers, can be used for audio purposes, even when the projector is in standby mode. Moreover, the CP-X4011N's Power Saving Mode reduces the standby power consumption to 0.5W.

The CP-X4011N features an HDMI input terminal for receiving digital video signals. By keeping the signal in the digital domain, the projector delivers high-quality images that are faithful to the original signal. The CP-X4011N also features Closed Captioning functionality.

The CP-X4011N offers easy maintenance, with features that include a hybrid filter, which requires less frequent cleaning, making longer operation possible. The lamp door on the CP-X4011N is on the top, while the filter cover slides in and out from the front bottom, simplifying maintenance and replacement of these parts.

ABOUT HITACHI
